EXPERIENCE

General Motors | Vehicle Distribution Management

Web Developer

JULY 2014 - PRESENT

- Member of team that created two brand new distribution applications responsible for distributing cars fresh off of the production line to individual dealers based on historical sales data and trends as well as dealer preference
- Distribution applications were primarily developed using Java Server Faces (JSF) and Oracle SQL
- Handled more UI intensive stories because of JavaScript expertise; even developing some user stories for the Brazil project in Angular 1.x because the level of interaction required could not be handled by JSF
- Team received GM IT Innovation Award (US project) and GM Brazil President's Award (Brazil project) for projects' success and business impact
- Along with a handful of other developers, coordinated with GM's User Experience team to develop an Angular 4 component library for GM internal use in between projects

Hewlett-Packard | Content & Digital Asset Management

Web Developer

MAY 2013 - JULY 2014

- Worked on multi-team project to enhance HP's marketing and support document tagging capabilities, to allow customers to find relevant materials more quickly
- Developed a custom, lazy-loaded, tree expansion style tagging interface in JavaScript to allow business users to tag documents in our system
- Developed a more advanced set operations style interface, to allow business users to write set arithmetic using tag groups, and would later be evaluated by Java on the server to provide the correct documents with the correct tags
- Represented team in daily project scrum call

Web Developer Intern

MAY 2012 - MAY 2013

- Developed dashboards to track support documents and binaries through HP's content management and translation process
- Provided L3 support for the team's three entity essential applications

PROGRAMMING LANGUAGES

JavaScript

Java

SQL
